Bruno Garcia - Sr. Full Stack Developer

Sao Paulo, Sao Paulo, Brazil bruno-151299@hotmail.com +5511996969301 in/bruno-garcia-9854b1161 brgarcias-portfolio.netlify.app/

SUMMARY

Senior Full Stack Engineer with strong expertise in GraphQL API design, optimization, and testing. Skilled in TypeScript, Node.js (NestJS), and SQL/NoSQL databases, with proven experience building scalable microservices, automated test frameworks, and CI/CD pipelines (Jenkins, Azure DevOps, GitLab). Proficient in Docker, Kubernetes, and AWS (EC2, S3, Lambda, API Gateway) to deliver secure and resilient cloud-native applications. Passionate about improving API reliability and mentoring teams.

EXPERIENCE

Software Engineer

PayPal **Oct 2025 – Present, Remote**

- Software Engineer focused on building scalable and high-performance backend solutions using GraphQL, TypeScript, and Node.js.
- Designed and maintained GraphQL schemas, improving data efficiency and client experience
- Developed and integrated APIs, ensuring reliability and seamless communication across services
- Optimized query performance and data fetching strategies for better scalability
- Applied best practices in clean architecture, code quality, and maintainability
- Collaborated with cross-functional teams to deliver robust, production-ready solutions.

Full Stack Developer

AB InBev **Feb 2025 – Oct 2025, Remote**

- Developed and maintained **high-performance GraphQL APIs** with NestJS, including resolver optimization and query performance improvements.
- Building high-performance web applications with Next.js, ensuring optimal user experience and performance.
- Designing and optimizing relational databases using Microsoft SQL Server to support business-critical applications.
- Deploying and managing cloud-based solutions on Microsoft Azure, leveraging Azure DevOps Services for CI/CD automation.
- Implementing best practices in code quality, security, and performance to ensure robust and maintainable software.
- Collaborating with cross-functional teams to align software solutions with business objectives.
- Managing source control, pipelines, and deployments using Azure DevOps Server.
- Designed and deployed cloud-native AI-driven applications using Next.js (React/TypeScript) and NestJS, integrating Azure AI Services for intelligent workflows.
- Built low-latency RESTful APIs and GraphQL services to support real-time data processing and agent communication.
- Orchestrated CI/CD pipelines (Azure DevOps & Jenkins) integrating automated testing for GraphQL services, ensuring continuous quality assurance.
- Optimized Microsoft SQL Server databases for AI-powered applications, focusing on performance and scalability.
- Collaborated with AI teams to prototype multi-agent interaction systems, leveraging modular microservices architecture.

Full Stack Developer

Serasa **Sept 2024 – Mar 2025, Remote**

- Focused on developing unit and end-to-end (E2E) tests using Jest, ensuring the reliability and quality of delivered applications.
- Designed and executed unit and end-to-end test suites for GraphQL APIs using Jest, ensuring reliability, security, and edge-case coverage.
- Experience in handling parallelism and concurrency, optimizing the performance of complex systems and ensuring efficiency in executing multiple simultaneous tasks.
- Implementation of solutions with AWS Lambda, SQS, SNS, and Step Functions, leveraging serverless resources to create scalable and highly available systems.
- Node.js: Development of robust and scalable applications using the NestJS framework to create modular and maintainable solutions.
- Development of RESTful APIs to facilitate service integration and meet client needs with high performance and security.
- Utilization of microservices-based architectures, promoting modularity and system resilience in production.
- Experience with API Gateway for request management and ensuring efficient communication between services.
- Developed serverless AI pipelines using AWS Lambda, SQS, and Step Functions, enabling scalable processing for agentic workflows.
- Engineered NestJS-based APIs with parallel task execution, optimizing concurrency for high-throughput GenAI use cases.
- Integrated AWS SNS for real-time event-driven communication between AI agents and external tools.
- Implemented Jest E2E testing to ensure reliability of AI-driven systems in production environments.
- Containerized services using Docker for consistent deployment across staging and production environments.
- Integrated .NET APIs within Microsoft ecosystem for business-critical processes.

Full Stack Developer

Domy **July 2024 – Mar 2025, Remote**

- As a Backend Developer, I specialize in creating robust and scalable server-side applications. Designing and implementing server-side logic to ensure high performance and responsiveness to front-end requests.
- Designed scalable server-side applications using .NET Core.
- Node.js: Leveraging the power of Node.js to build efficient and scalable network applications. Utilizing NestJS framework to develop maintainable and modular server-side applications.
- AWS: Implementing and managing cloud infrastructure using Amazon Web Services to ensure reliability and scalability.
- API REST: Designing and developing RESTful APIs to enable seamless communication between client and server.
- Microservices: Building and orchestrating microservices architecture to enhance modularity and improve system resilience.
- API Gateway: Managing and routing API requests efficiently with API Gateway to ensure secure and consistent service delivery. Passionate about leveraging modern technologies to solve complex problems, I thrive in dynamic environments where innovation and continuous learning matter.
- Architected AWS cloud-native solutions to support AI agent deployment, including API Gateway routing for dynamic tool access.
- Designed RESTful APIs for seamless integration of third-party AI services, enhancing system modularity.
- Utilized microservices orchestrated via Kubernetes to isolate agent functionalities, improving fault tolerance and scalability.
- Implemented containerized microservices (Docker) orchestrated with Kubernetes, ensuring scalability and efficient resource utilization for GraphQL-based services.

Tech Lead

Trocafone **May 2023 - July 2024, Remote**

- Built and optimized GraphQL APIs with NestJS and PostgreSQL, including automated testing, caching strategies, and deployment in AWS (EC2, S3, Lambda). Leveraged Jenkins pipelines for CI/CD.
- Migrated legacy PHP systems to Python (FastAPI) and .NET Core microservices, improving scalability and maintainability.
- Collaborated with the Product team to understand portfolio management, analysis, and risk-related requirements, actively contributing to design, coding, and testing innovative solutions.
- Implemented and updated application modules under Product team supervision, ensuring alignment with established guidelines and business objectives.
- Led discussions, analysis, and development of new projects, ensuring technical feasibility and alignment with strategic goals.
- Worked with a wide range of technologies: PHP (CodeIgniter/Laravel), GraphQL/REST APIs, ReactJS/NextJS, NodeJS/NestJS, Python, MySQL/PostgreSQL, Jira, Jenkins, AWS Cloud (RDS, EC2, S3, SQS, SNS, Lambda).
- Led development of five major projects, integrating Node.js/NestJS and PHP/Laravel backends with GraphQL and REST APIs, and React.js/Next.js or Blade (PHP) frontends
- Developed AI-augmented applications with Python (FastAPI) and Node.js/NestJS, including backend logic for autonomous agent workflows.
- Built dynamic React/Next.js interfaces to visualize AI agent reasoning flows, integrating state management and real-time updates via GraphQL subscriptions.
- Integrated AWS S3, SQS, and Lambda for serverless data processing, reducing latency by 40% in real-time APIs.
- Spearheaded migration of legacy PHP systems to Python/Node.js microservices, enhancing scalability for AI-driven use cases.
- Containerized legacy PHP systems with Docker and migrated to Kubernetes-managed clusters, improving deployment reliability and scalability.

Backend Developer

Trocafone **January 2022 - May 2023, Hybrid**

- Developing scalable and efficient web applications using Node.js, TypeScript, Next.js and Python APIs. Implementing business logic and front-end to back-end integration using GraphQL and REST APIs.
- Developing scalable and efficient web applications using Node.js, TypeScript, Next.js, and Python APIs. Implementing business logic and end-to-end integration using GraphQL and REST APIs.
- Collaborating with designers and developers to translate business requirements into technical features.
- Utilizing AWS Lambda, SQS, CloudWatch, and S3 to build serverless architectures ensuring scalability and availability
- Managing PostgreSQL and Redis databases for efficient data storage, retrieval, and caching.
- Actively contributing to all stages of the software development lifecycle, from planning to delivery and maintenance.
- Using GitLab and JIRA for source code management, collaboration, and issue tracking. Continuously improving technical skills and staying updated with industry best practices.
- Designed and developed GraphQL APIs with Apollo Server, including queries, mutations, and subscriptions for real-time agent interactions, reducing over-fetching compared to REST.
- Implemented GraphQL schema stitching and federation to unify multiple services, improving maintainability and scalability.
- Leveraged PostgreSQL for structured data and Redis for caching, enhancing GraphQL resolver performance.
- Deployed AWS CloudWatch for monitoring AI service performance and optimizing resource allocation.
- Collaborated with UX teams to prototype interfaces for autonomous agent behavior visualization.
- Prototyped CrewAI-inspired workflows for multi-agent collaboration experiments, focusing on autonomous task delegation.

Frontend Developer

Trocafone **March 2021 - January 2022, In-Person**

- Integrated GraphQL APIs to streamline data fetching, improving query efficiency and reducing over-fetching compared to REST.
- Development of responsive and intuitive user interfaces using React.js, Material-UI, and Bootstrap.
- Implementation of application logic and state management with Redux.js, ensuring scalability and maintainability.
- Writing clean, efficient, and modular code in JavaScript, TypeScript, HTML5, and CSS to guarantee functionality and visual consistency.
- Collaborating with designers and developers to translate business requirements into high-quality software solutions.
- Troubleshooting and optimizing front-end application performance, integrating external libraries and plugins (e.g., JQuery) to enhance functionality and user experience.
- Adhering to web development standards and best practices, participating in code reviews and unit testing for quality assurance.
- Built React.js interfaces with TypeScript for data-intensive dashboards, improving UX for AI-driven insights.
- Optimized frontend performance by 30% using Redux state management and Material-UI components.
- Integrated and consumed GraphQL APIs with Apollo Client, leveraging queries, mutations, and caching strategies to optimize data fetching and reduce over-fetching compared to REST.
- Designed and implemented GraphQL queries and fragments for modular and efficient data handling, improving maintainability and reusability across components.
- Enhanced application responsiveness by combining GraphQL subscriptions with React to support real-time updates in dashboards.

Frontend Developer Jr

Agência Art Seven **September 2020 - March 2021, In-Person**

- Engage in in-depth discussions and thorough analysis of new customer requirements, strategically crafting websites with a strong focus on conversion optimization. Meticulously enhance SEO strategies while ensuring impeccable responsiveness and optimal site performance. Adapt websites according to evolving customer needs.
- Embark on a journey into framework languages and libraries like React and JQuery, gaining valuable insights into their application and potential.
- Cultivate a proficient understanding of PHP and Node.JS, encompassing their distinct back-end architectures. Develop expertise in MYSQL, delving into its intricacies for efficient database management.
- Taking on a pivotal role in constructing diverse online platforms, including websites, captivating landing pages, dynamic online, landing pages, ecommerce and backoffice/erp.
- Working with HTML/CSS, Javascript, PHP, MYSQL, Wordpress, Nodejs, React.

Intern Software Developer

Ingenico Group / Shaping the future of payment **April 2018 - April 2020, In-Person**

- Gained foundational experience in WEB infrastructure, including a comprehensive understanding of its key concepts, back-end and front- end structures, as well as databases and servers.
- Acquired introductory knowledge of programming languages such as JAVA, Android, C, and C++.
- Enhanced skills through hands-on project development, particularly within internal systems, involving the implementation of enhancements and maintenance of system components.
- Spearheaded tailoring and customizing payment terminals to meet specific requirements.
- Demonstrated expertise in addressing customer needs through interface design, proficiently analyzing application logs, and serving as a pivotal troubleshooter. This role included the creation of development documentation for future reference.
- Gained foundational experience in Java, C/C++, and payment terminal customization, focusing on secure transaction logic.

Young HR Apprentice

Ingenico Group / Shaping the future of payment **April 2017 - April 2018, In-Person**

- **Learning the Basics**: Grasp fundamental HR concepts such as recruitment, employee relations, training, and HR policies.
- **Shadowing HR Professionals**: Observe experienced HR practitioners to understand their roles and responsibilities in real-world scenarios.
- **Assisting with Administrative Tasks**: Help with paperwork, data entry, and scheduling interviews to understand the operational side of HR.
- **Participating in Recruitment Processes**: Assist in sourcing candidates, screening resumes, and coordinating interviews under the guidance of senior HR staff.
- **Supporting Employee Onboarding**: Aid in orientation programs, preparing materials, and ensuring new hires feel welcomed and informed about company policies.
- **Learning HR Software and Systems**: Gain proficiency in HRIS (Human Resources Information Systems) and other software used for payroll, attendance tracking, and performance management.

PROJECTS

Monolith Migration

Trocafone • June 2023 - June 2024

- Spearheaded the migration of a **legacy PHP monolith** to a **microservices architecture** using Node.js, FastAPI, and .NET Core.
- Implemented **GraphQL gateways** for unified API access, improving performance and developer experience.
- Containerized services with **Docker** and orchestrated deployments via **Kubernetes**, enhancing fault tolerance and scalability.

Realtime Dashboard

Trocafone • January 2023 - June 2023

- Built a **real-time monitoring dashboard** leveraging GraphQL subscriptions for live updates.
- Optimized backend performance with **Redis caching** and **PostgreSQL query tuning**.
- Integrated monitoring and alerting using **AWS CloudWatch** to ensure reliability under heavy load.

Saldofone

Trocafone • April 2022 - January 2023

- Developed a **GraphQL-based credit balance API** integrated with **AWS S3, Lambda, and SQS** for real-time updates.
- Designed and executed **end-to-end testing strategies** using Jest, ensuring API correctness and resilience.
- Implemented **CI/CD workflows with Jenkins**, enabling seamless deployments across staging and production.

Reparofone

Trocafone • March 2021 - March 2022

- Built a **repair management system** exposing GraphQL and REST APIs to manage device repair workflows.
- Migrated legacy components to **containerized services with Docker**, deployed via Kubernetes.
- Improved API performance by **30% through resolver optimization and query batching**.

My Team Dashboard

AB InBev • March 2025 – Present

- Designed and implemented **GraphQL APIs** with NestJS to provide real-time data aggregation for business KPIs.
- Integrated **Jenkins CI/CD pipelines** with automated unit and end-to-end testing suites to ensure high reliability.
- Deployed microservices in **Azure Kubernetes Service (AKS)**, ensuring scalability and resilience.

AI Agentic Workflows (side project)

Personal Project • 2024 – Present

- Designed **multi-agent collaboration workflows** using NestJS and GraphQL APIs.
- Experimented with **serverless AI pipelines (AWS Lambda, SQS, Step Functions)** to support autonomous decision-making.
- Created **E2E tests** for validation of AI-agent interactions and scalability in cloud environments.

EDUCATION

Bachelor's Degree in Computer Science

Universidade São Judas Tadeu • São Paulo, BR • 2018-2022

CERTIFICATIONS

Name	Provider	Year
Software Architecture Fundamentals Course	Full Cycle	05/2025 – 07/2025
SOLID Express Course	Full Cycle	02/2025 – 04/2025
Time Management Fundamentals	LinkedIn	11/2024 – 01/2025
Introduction to Data Science: Basic Concepts	LinkedIn	09/2024 – 11/2024
Continuous Integration Course	Full Cycle	05/2024 – 07/2024
Advanced Patterns and Techniques Course with Git and Github	Full Cycle	03/2024 – 04/2024
Docker	Full Cycle	01/2024 – 03/2024
Java Course	Rocketseat	06/2023 – 01/2024
Accademia Accenture - Front-end Angular	Accenture Brasil	06/2022 – 01/2023
Bootcamp Full Stack	IGTI	06/2021 – 06/2022

Succeeding in Web Development: Full Stack and Front End	LinkedIn	03/2021 – 06/2021
Certificate in C Language	Udemy Brasil	09/2020 – 02/2021
Digital Employability	Laureate São Paulo	03/2020 – 03/2021

Name	Provider	Year
Personal Brands	Laureate São Paulo	03/2020 – 03/2021

COURSEWORK

Business English

Number One, SP - BR • 2022 • Communication

INVOLVEMENT

Community Service Volunteer

Santa Teresinha, SP - Brazil • Colégio Salesiano Santa Teresinha • January 2014 - December 2016

- **Organized Community Clean-Up Events**: Led and coordinated monthly community clean-up events, successfully mobilizing over 100 volunteers to improve local parks and public spaces.
- **Tutored Underprivileged Students**: Provided weekly tutoring sessions in math and science for 20 underprivileged elementary and middle school students, resulting in an average academic performance improvement of 15% in their grades.
- **Fundraised for Local Charities**: Spearheaded fundraising campaigns, raising over $10,000 for local charities and community programs through events, social media, and direct outreach.
- **Assisted in Food Distribution**: Volunteered at local food banks, assisting in the distribution of over 1,500 food packages to families in need, ensuring timely and efficient delivery of essential supplies.
- **Developed Community Workshops**: Created and facilitated 12 workshops on essential skills such as resume writing, job interview preparation, and financial literacy, empowering over 150 community members to improve their employability and financial stability.
- **Supported Elderly Care Programs**: Provided companionship and assistance to 30 elderly residents in nursing homes, engaging in activities such as reading, playing games, and organizing recreational events, enhancing their quality of life.

SKILLS

GraphQL & APIs: GraphQL (advanced schema design, resolvers, query optimization), REST APIs, API Gateway

Languages & Frameworks: TypeScript, Node.js (NestJS), React.js (Next.js), Python (FastAPI, Django), .NET (C#)

Databases: SQL (PostgreSQL, MS SQL Server, MySQL), NoSQL (MongoDB, Redis)

Cloud & DevOps: AWS (EC2, S3, Lambda, SNS, SQS, Step Functions), Azure, Docker, Kubernetes, Terraform (basic), Google Cloud (familiarity)

CI/CD & Testing: Jenkins, Azure DevOps, GitLab CI, Jest (unit/E2E), automated test frameworks, MLOps practices

Other: Microservices, DDD, scalable system design, mentoring
